### **A-PDF To FlashBook**

For those who have more than one PDF file, the need to convert it to flash in order to be able to present them is a must. A-PDF to FlashBook is the answer to the problem. It can convert all PDF files into flash presentations, in order to be able to use them as bookmarks. All you have to do is select the file you wish to convert to flash and click "Add". You can then select the desired quality, as well as the page where it is to be converted to flash. It can also be defined how large it should be. For example, if you need to make the presentation available on your website, it can be much

smaller than if it's meant to be published on a blog. If the size is decided, it will be needed to have a CD burning program. The output can be set to HTML, ZIP or EXE, and, in case you want it to be a mobile version, it can be done as well. You can also set the output path, the title and a name for the presentation. A-PDF to FlashBook has a batch conversion function as well. This way you can convert a great number of PDF files in one. When the conversion is complete, you can download and/or burn it to CD. While it has many advantages, it has some issues that make it not as good as it should be. For example, when converting PDFs to flash, it sometimes becomes unstable. This is due to the fact that, when creating the presentation, it can make many changes in the PDF and, if it's unstable, these can ruin the output. We had a crash in every conversion we made, so be careful. A-PDF to FlashBook is, however, a good converter to

present your flash presentations. Thank you for reading, and don't forget to leave a comment.
