An important difference between Lightroom 6 and the two previous releases is that you no longer have to enter your credit card number to register your software. This is not new to Lightroom for Windows/Mac, but this time, Adobe is inviting schoolkids to participate by giving away the software for FREE. "Why?" because it may provide some small amount of revenue ultimately. As a pro photographer, I simply select the $79 subscription option and proceed. The fanfare for this release was much greater than usual. The keynote at the Adobe Max conference was presented by the recently departed David Karp. The key features introduced during his keynote were "AI powered creativity" and "AI powered design". They're the same features used to create images using Photoshop, but how this will affect design is not yet clear. The current version of Adobe Illustrator is not the AI-powered one, but rather a basic "AI-engined" product. With the release of Photoshop CC, we're only seeing the AI-based features. At this time, it's difficult to determine how much of an impact the AI will have on both design and image creation. Photoshop CC is on Parallels and Parallels has been the topic of a lot of debate due to the low performance of some of the Parallels versions of Windows. I can only report on my own experience (and the experience of all my positive customers), which is generally that its performance seems to be as good as a native install of Windows, but generally speaking, I'm hoping that it will be faster than the classic Mac OS.

Photoshop has added several features to the software used to rig computer-generated images in games. Photoshop's workshop allows artists to create their own rigs, scene maps, keypost and materials. The most significant power user feature in Photoshop CS9 is multi-pattern blend which allows you to combine two patterns, multiply the color over the top of the original pattern and add in a secondary pattern. In addition to this, Photoshop has improved layer masking which allows you to edit areas of a photo that are hidden by other layers in the stack. In the future, even more layers can be masked. Photoshop has continued to evolve the deep integration between Adobe camera raw, Photoshop's features and Instagram. Other recent updates include improvements to white balance and lens corrections. Users can now apply selective adjustments (image removal) to a lens filter. There are also new light, hue, saturation and exposure adjustment options in camera raw as well as the new Colorize tool. Most of these enhancements are available in the Creative Cloud editions of Photoshop and Lightroom. With today's newest version of Photoshop, you can now tweak and enhance your filmic look and feel with a host of filmic effects. The special effects, icon themes and hue adjustment tools are all designed with your professional capabilities in mind. From desktop to mobile, there's a dedicated app and keyboard shortcuts for all your needs. Because the Garage offers all the features you'll need for your digital film, you can spend less time organizing and more time working.

"With the help of all of our creative and technology innovators, we continue to define the future of how we design, develop and deliver digital content," said Shantanu Narayen, CEO, Adobe. "In Photoshop, the new features announced today make it more intuitive and easier than ever to design, create and share beautiful work both in the browser and on the desktop. Interactive editing makes the world of work more mobile, making it easier to collaborate across surfaces and GPUs. With the help of AI, we're bringing advanced selection and creative tools directly into the user experience, making Photoshop the indispensable tool to any designer." "Photoshop already combines the worlds of print and digital content seamlessly," said David Wadhwani, Adobe vice president and general manager, Creative Cloud. "The new features announced today continue that path, empowering creatives to seamlessly blend traditional print and digital content from a single tool." Share for Review (beta) makes it easy for teams to build prototypes and collaboratively review designs while staying in Photoshop. Sharing your edits for review with a single click is now a snap thanks to support for both Web and mobile. In addition, the new mobile app makes it easy to design for the web without ejecting from Photoshop—and bring designs back to the desktop for more editing. Share for Review allows teams to create prototype work without exiting Photoshop, enabling them to immediately discuss and iterate their prototypes, reducing the need for separate file types, and embrace the built-in collaborative workflow. A new Share for Review interface provides a simple user experience for working in Photoshop with or without the browser. There are new navigation modes that allow you to select whether the design or the prototype is open.
