Simply put, Photoshop has the highest megapixel count, and it allows you to work with that resolution. So you can throw as many big pixels onto the canvas, and it looks good. But does it really matter, or is a higher DP or less megapixels enough for you? The truth is, each user has different needs. And for some photographers, they need to work with bigger files. Almost everything Adobe now does is about the cloud and helping you get stuff from one service to another. With CS6, you have to use their free Creative Cloud app to create and edit files. CS6 has a seriously bad sync issue where it destroys images. The cloud just does not work the way we expect, or how Adobe has been providing it. The program often won't sync and if what does sync isn't in the right spot on your hard drive, it overwrites the image. In CS6, this had led to the "quick revise" which would allow you to undo your changes. The software would fix the changes and then ask if you still wanted to do it. Users felt confused by this as it seemed like it was asking them to go back to the old version of the photo rather than accepting the new. Only after an Apple update did CS6 allow you to undo changes in photos, but that left a memory of the previous revision tainting the image and making it reset to the "new" version. The result was that edits went back to the web site and appeared as the old version. Lightroom editing requires a photo desktop, not a tablet. The interface is intuitive and the toolset is unparalleled. It is not perfect, and I would agree with some of the more serious gripes I have about it, but what Adobe has built doesn't fit anything else. I can truly say that Lightroom is indispensible for a large segment of the population. Below the surface, Lightroom is further developed as a templating tool, with seamless blending of traditionally handled tasks, like social media management. From comments and likes, in-line videos, and even the editing model itself can be extended and altered via templates. To this day, Lightroom is a very intuitive and streamlined app. It needs more recent features than it does to not be hit by the same glitches as its older versions. I wonder if Adobe tried to make Lightroom as flexible as it is in order to appeal to the number of quirks it now has. One thing that may help if the app doesn't continue to see major

development is to see more of the backend, where templates are then also made available to the iPad version.
